Problem 1:

Write a program that reads a number and determines whether it is positive, negative or zero.

Problem 2:

Write a program that determines whether a baby's weight is normal or not. For girls, normal babies weight are 2.5 to 4.5 KG. On the other hand, for boys the normal weights are 4 to 5.5 KG.

Input1:

M

4

output1:

Baby's weight is normal

—----------------------------

Input2:

M

5

output2:

Baby's weight is not normal

—--------------------------------

Input3:

F

4.75

output3:

Baby's weight is normal

Problem 3:

Write a program to swap the values of two integers using the third variable.

Problem 4:

Write a program to check whether a triangle is Equilateral, Isosceles or Scalene.
